TITLE: Angiotensin II activating factor in rat plasma

SOURCE: Kiserletes orvostudomány, v. 17, no. 3, 1965, 248-252

TOPIC TAGS: rat, biosynthesis, biologic metabolism, gland, hormone,
endocrinology, blood plasma, drug effect, pharmacology

ABSTRACT: The effect of angiotensin II on the
in vitro synthesis of steroids by the rat adrenals has been studied in Krebs-
Ringer solution and in rat plasma. An effect of angiotensin on the increase
of steroid synthesis could not be demonstrated in either of the incubation
media. As compared with the Krebs-Ringer solution, rat plasma alone effected
a significant increase in aldosterone production by the adrenals. The authors
thank the CIRA and the Organs of the Pharmaceutical Factories for placing the
Angiotensin II and Steroid preparations at their disposal. Orig. art. has 3 figures.

TITLE: New observations on the function of the angiotensin-aldosterone system

SOURCE: Academia scientiarum hungaricae. Acta physiologica, v. 27, no. 3, 1965, 199-203

TOPIC TAGS: rat, hormone, blood plasma, adrenal gland, corticosteroid, hormone

ABSTRACT: The effect of angiotensin II on steroid synthesis by the rat adrenal cortex has been studied in Krebs-Ringer medium and in rat blood plasma. Attempts to demonstrate that angiotensin would have an increasing effect on the rate of steroid synthesis failed in both media. Moreover, a depression in aldosterone and corticosterone production was observed, especially in the plasma medium. No evidence was obtained for an activation of angiotensin II by blood plasma. A significantly higher rate of steroid synthesis was achieved in the plasma medium than in the Krebs-Ringer medium. The authors are indebted to Ciba Ltd., Basel, for supplies of angiotensin II and Organon Ltd. Oss., for the steroid preparations. Orig. art. has: 2 figures. Orig. art. in Eng. 22

AUTHOR: Szigeti, G.

TITLE Comments on the electroluminescence of ZnS single crystals 4

SOURCE: Acta physica polonica, v. 26, no. 3-4, 1964, 829-835

TOPIC TAGS: luminescence, luminescence center, electroluminescence, crystalline phosphor photoluminescence, light emission, excitation, zinc sulfide single crystal, energy transfer, lattice, zinc sulfide

ABSTRACT: The purpose of this work is to clarify the mechanism of electroluminescence and to determine the light efficiency and surface brightness that can be attained by luminescence. The experiments were carried out with crystals of high purity, and the excitation was effected by a.c. or d.c. voltage. The experimental results show that in the case of electroluminescence the spectrum of emitted light has a band structure. The wavelength maxima of the bands correspond to the peaks of photoluminescent or cathodoluminescent spectra, but the height ratio of the peaks differs with the excitation method. The data obtained fail to solve the main problem of energy transfer to the lattice from electric fields or from charge

Card 1/2

Title : The Possibilities of the Economy of Concentrates in the Maintenance of Young Hogs on Alfalfa Pasture (Vozmozhnosti ekonomii kontsontirovannykh kormov pri soderzhanii molodnyak svinoy na lyutsernovom vypase)

Orig Pub : Magyar tud. akad. agrartud. oszt. kozl., 1956, 10, No 1-4, 119-122

Abstract : In the experiment conducted with regard to comparative fattening with concentrates, and with concentrates plus alfalfa pasture, it was found that the young pigs fed alfalfa consumed 33% less of concentrates per unit of weight gain, and yielded an increase in weight 15% less than their controls (about 500 g.).

"Effect of Aorta Constriction on the Steroid Synthesis of Rat Adrenals"

Budapest, Kisérletes Orvostudomány, Vol 18, No 6, 1966; pp 595-599.

Abstract: The effect of the change in renal circulation on the aldosterone- and corticosterone synthesis of the surviving adrenals of rats was investigated. Through constriction of the aorta above the renal vessels the steroid synthesis is increased, while constriction below the origin of the renal vessels leads to a decrease in this synthesis. Nephrectomy eliminated the difference between the two constriction groups; hence the difference is to be attributed to one of the results of the change in renal circulation. The steroid synthesis of nephrectomized and constricted groups was higher than that of the steroid synthesis of the group constricted below the renal vessels as well as of the group which had undergone apparent operation.

✓ 24. Studies on the adsorption of gas mixtures. II.* A new chromatographic method for determination of mixed adsorption: adsorption of CO_2 - C_2H_2 mixtures on charcoal. (In English) G. Schay, Gy. Székely, G. Szigetváry, *Acta Chimica Academiae Scientiarum Hungaricae*, Vol. 12, 1957, No. 3-4, pp. 309-324, 5 figs. 4

A new method of frontal gas chromatography has been evolved for determining the adsorption isotherms of pure gases and of mixtures. The method is based on continuous measurement and comparison of the rate at which the gas is fed onto and issues from the adsorption column. If the adsorbable gas displaces an inert gas with which the column was previously charged, the volume passing out until the breakthrough of the adsorbable gas gives the dead volume capacity of the apparatus, therefore there is no need for a separate determination of the latter. Isotherms of both pure and mixed CO_2 and C_2H_2 were determined by the method developed and the results compared with the theory derived in the previous study. 11

 Szigyártó, Zoltán, A hidrológiai események visszatérési ideje. [Recurrence of hydro-
 logical events.] *Hidrológiai Közlemény*, Budapest, 37(4):325-329, 1937. 2 figs., table, eqs.
 German and English summaries p. 328-329. DWB—The paper deals with the time of re-
 currence of hydrological events occurring once a year, e.g., river stage, discharge, etc., at a
 fixed time of the year in some section of a watercourse. It is shown that, if the occurrence or
 absence of the event is independent of the events of the preceding years, the probability of
 recurrence within a number of years after the previous occurrence may be expressed by a
 negative binomial or PASCAL distribution. The function values of a PASCAL distribution and
 its deviations are shown graphically. Subject Heading: 1. Hydrologic frequency analysis.—

"Leprechaunism. Donohue Syndrome."

Budapest, Orvosi Hetilap, Vol 103, No 23, 9 June 63, pages 1075-1080.

Abstract: [Authors' Hungarian summary modified] Two cases are reported among sisters with symptoms identical with those reported by Donohue. The characteristic changes are mainly due to early ripening of the ovarian follicle, (probably during the 6-7 intrauterine months), accompanied by an overproduction of estrogens. It resulted in hyperplasia of the nipple and external sex organs, hypertrichosis, increased 17-ketosteroid excretion, hyperfunction of the Langerhans isles and parathyroids as well as a decrease of the growth hormone of the pituitary. The syndrome is similar to the Stein-Leventhal syndrome of adults and may be its intrauterine analogue. Available data give no suggestions for the cause of this early ripening of the follicles. 1 Hungarian, 5 Western references.
